Mastered technologies

- **Software development and programming: Python, Java, advanced C++**
- **Database: SQL.**
- **Enterprise architecture: TOGAF, MERISE.**
- Web Development: HTML, CSS, JavaScript, WordPress.
- **tool: Git**

Soft Skills

- **Project Management**
- **Problem Solving**
- **Adaptability and Flexibility**
- **Collaboration Leadership**
- **Analytical reasoning**

About me

As a student of artificial intelligence and digital transformation engineering, I am deeply passionate about web development and the digital evolution of businesses. I take particular pleasure in designing contemporary interfaces, optimizing performance, and developing practical and effective solutions.

Constantly pursuing new knowledge, I aim to enhance my technical skills and engage in practical work environments to actively contribute to innovative and value-added projects.

Experience

Bank Management Application – C Programming Language

Development of a banking application featuring role management (customer, employee, admin) and essential operations (account creation, transactions, transfers). Persistent storage through files, secure access, and data validation to guarantee reliability.

ATTENDIFY – Facial Recognition Attendance Management System

Development of an automated time and attendance system utilizing facial recognition through Dlib and Haar Cascade, facilitating swift and accurate student identification. Creation of an intuitive interface featuring an integrated chatbot to enhance user interaction. Incorporation of a MySQL database for real-time monitoring, attendance management, and data export in CSV format. Robustness is guaranteed through input validation and SQL query optimization.

Library Management System

Developed a comprehensive web-based library management system to streamline book lending, user registration, and administrative tasks. The platform features user authentication, book catalog management, reservation handling, blacklist management for overdue users, and automated notifications. Implemented secure user roles (admin, student), real-time reservation approval, and dynamic inventory tracking. Technologies used include PHP (MVC architecture), MySQL, HTML/CSS, and JavaScript.

Pomodoro Multi-Project Time Management App

Developed a desktop productivity app using the Pomodoro technique. Features include multi-project management, customizable timers, real-time statistics, and system notifications. Built with MVC architecture and MySQL integration.

Education

Student in artificial intelligence and digital transformation engineering
2022-PRESENT
National School of Applied Sciences (ENSA Al-Hoceima)

Baccalaureate in Mathematical Sciences 2021-2022
2021-2022
Al Joulane High School, Mohammedia, Morocco
